PORTABLE EQUIPMENT FOR MAGNETOTHERAPY

Portable device for low frequency pulsed magnetic fields therapy. This device is particularly suitable for home treatment, especially if it has to be followed for several hours a day and for long periods.

Magnetic generates a variable square wave (6-12-25-50-100 Hz) of adjustable average intensity (20-40-60-80-100 Gauss)

It has two outputs which can pilot a couple of solenoids.

MAIN THERAPEUTIC APPLICATIONS:

Recent fractures - consolidation delays - pseudoarthrosis - localized osteoporosis - degenerate arthropathies (coxartrosi - gonartrosi) - localized dermatological shapes or surgical wounds. Ulcere of the inferior limbs.)

TECHNICAL CHARACTERISTICS:

Power supply: 230 Vac 50Hz
Absorbed power: 50 W
Top intensity of the magnetic field: 100 Gauss
Medium intensity of the magnetic field: 50 Gauss
Magnetic size: 148 x 190 x 67
Solenoid size: 105 x 90 x 28

EQUIPMENT:

A couple of solenoids
1 elastic band with Velcro strap
1 PVC suitcase
Instructions for use with therapy application scheme

Conform to the relevant legislation:
2006/95/CE (electric safety/ low power)
2004/108/CE (electromagnetic compatibility)
